USER MANUAL

IP Keyboard

Version: 1.0

Date: June 2018

INDEX

Overview

This Network Keyboard can be used to control the speed dome, as well as support 1 channel of video view at up to 1080P resolution. It is easy to operate and configure settings.

Features

5'' LED screen, 3-axis joystick;

Support H.264, Onvif 2.4 compatible.

Administrator management;

Shortcut keys for wiper and IR control operation.

1 channel video display, support encode up to 1080P.

Auto searching connected devices in the same network segment;

Shortcut keys for dome control, setting and callup of preset, tour and pattern;

Technical Specification

Model Name	Network keyboard controller
Control Mode	Network
Controllable Device	Network High Speed Dome, network PTZ
Screen display	5" LED screen
Interface	1 RJ45, 2 RS485(reserved), 1 DC12V, 1HDMI output, 1 USB port
Ambient Temp.	-20°~55°
Power Supply	DC12V/2A
ONVIF	ONVIF2.4
Joystick	3D joystick
Language	English
Access Device No.	No upper limit（display by single picture）

Image Switch Mode	ID by key
Product Size	260mm*160mm*48mm
Weight	Gross: 1.52KG / Net:1.0KG
Carton Size	300mm*210mm*160mm

Package Contents

Keyboard controller   1 pc

Power supply   1 pc

User manual   1 pc

# 1. Appearance

1.1 Front panel and function buttons introduction

Fig.1

1.2 Rear panel interface introduction

Fig.2

①Input power : DC12V/2A

②Reservation output interface: RS485 (not available now)

③Power indicator

④USB interface : reserved

⑤RJ45 : for LAN

⑥HDMI : available to connected to the monitor

# 2. Function & Operation

This Keyboard controller with the 5" LED screen, supports both main Stream and sub-Stream display

Press the button " Menu "Enter to the Main OSD, find the "System"item and choose the "Main Stream"or

"Sub Stream" ,press "Enter"

Remark: 1. The keyboard controller support the encoder max 1080P, for the camera is more than 1080P,

please use Sub Stream, so image will be displayed properly.

2. The keyboard controller is with screen standby function, when the controller is not operated

for long time, the screen will be in standby mode, user can move the joystick or press any key

to wake up the screen.

2.8 Factory default

To enable the factory default, user just need to enter menu, choose" Default config"

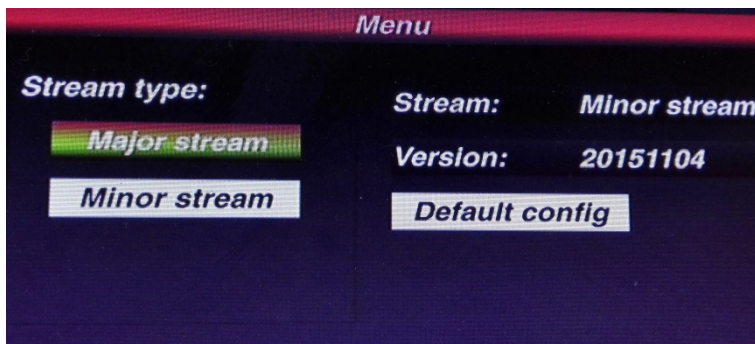

Fig.10

2.9 IP address

The Default IP address of the keyboard is "192.168.1.2"

To be sure the controller and dome connected work properly, please make sure they are in the same

network segment, but not same address.

If they are used the same IP address, please change either the dome address or the keyboard controller

address.

Changing the IP address of the Keyboard as following：

Press the button" Menu "enter to the main OSD and then find the "Network" , input the IP address . press the "Enter" to save. after that the keyboard will be reboot, that means changing address is successful.

3.0 Troubleshooting

Issue	Possible Reason	Solution
Can't add the Camera	IP address of the IP camera and controller is same	Change either IP address of keyboard or IP address of camera
Can't run the Tour	The command is inconsistent with dome connected	Check the dome manual, make sure the right commend to run tour.
Auto Reboot	Input power voltage is too low	Change the correct power supply
Get the IP address ,but can't add the Device	The cursor has been stuck in the search, when you add the device, the keyboard research again	Move the Cursor to the IP address and confirm to add
After Power on, the controller can not work,	1.Power supply used is not correct；2.The controller is broken	1.Change a correct power supply 2. Contact your supplier for replacement.
Controlling is not sensitivity	Compatibility between controller and dome	Contact supplier to check the compatibility
No Image display, but can control.	The encode of Dome is higher than 1080P.	Change the the stream to sub Stream from the controller
