# About the Company

ZKTeco is one of the world's largest manufacturer of RFID and Biometric (Fingerprint, Facial, Finger-vein) readers. Product offerings include Access Control readers and panels, Near & Far-range Facial Recognition Cameras, Elevator/floor access controllers, Turnstiles, License Plate Recognition (LPR) gate controllers and Consumer products including battery-operated fingerprint and face-reader Door Locks. Our security solutions are multi-lingual and localized in over 18 different languages. At the ZKTeco state-of-the-art 700,000 square foot ISO9001-certified manufacturing facility, we control manufacturing, product design, component assembly, and logistics/shipping, all under one roof.

The founders of ZKTeco have been determined for independent research and development of biometric verification procedures and the productization of biometric verification SDK, which was initially widely applied in PC security and identity authentication fields. With the continuous enhancement of the development and plenty of market applications, the team has gradually constructed an identity authentication ecosystem and smart security ecosystem, which are based on biometric verification techniques. With years of experience in the industrialization of biometric verifications, ZKTeco was officially established in 2007 and now has been one of the globally leading enterprises in the biometric verification industry owning various patents and being selected as the National High-tech Enterprise for 6 consecutive years. Its products are protected by intellectual property rights.

# About the Manual

This manual introduces the operations of **SC800**.

All figures displayed are for illustration purposes only. Figures in this manual may not be exactly consistent with the actual products.

Features and parameters with  $\star$  are not available in all devices.

# **Document Conventions**

Conventions used in this manual are listed below:

### **GUI** Conventions

| For Software |  |  |  |
|--------------|--|--|--|
| Convention   | Convention Description   |  |  |
| Bold font    | Used to identify software interface names e.g., OK, Confirm, Cancel.   |  |  |
| >            | Multi-level menus are separated by these brackets. For example, File > Create > Folder.  |  |  |
| For Device   |  |  |  |
| Convention   | Description  |  |  |
| <>           | Button or key names for devices. For example, press <ok>.</ok>   |  |  |
| []           | Window names, menu items, data table, and field names are<br>inside square brackets. For example, pop up the [New User]<br>window. |  |  |
|              | window.  |  |  |

### Symbols

| Convention | Description  |  |  |  |
|------------|--|--|--|--|
|            | This represents a note that needs to pay more attention to.                            |  |  |  |
| ÷          | The general information which helps in performing the operations faster.               |  |  |  |
| *          | The information which is significant.  |  |  |  |
| ۷          | Care taken to avoid danger or mistakes.  |  |  |  |
|            | The statement or event that warns of something or that serves as a cautionary example. |  |  |  |

# 1 Safety Measures

The following instructions are intended to make sure that the user uses the product correctly to avoid risk or property loss. The following precautions are to keep users safe and prevent any damage. Please read carefully before installation.

Noncompliance with instructions could lead to product damage or physical injury (may even cause death).

- **1. Read, follow, and retain instructions** Before using the device, make sure that you have read and followed all safety and operational instructions.
- Do not ignore warnings Follow to all warnings on the unit and in the operating instructions.
- Accessories Use only manufacturer-recommended or product-sold accessories. Please do not use any other components other than manufacturer suggested materials.
- Precautions for the installation Do not place this device on an unstable stand or frame. It may fall and cause serious injury to persons and damage to the device.
- **5. Service** Do not try to service this unit yourself. Opening or removing covers may expose you to hazardous voltages or other hazards.
- 6. Damage requiring service Disconnect the system from the Mains AC or DC power source and refer service personnel under the following conditions:
  - When cord or connection control is affected.
  - When the liquid spilled, or an item dropped into the system.
  - If exposed to water or due to poor weather (rain, snow, and more).
  - If the system is not operating normally, under operating instructions.

Just change controls defined in operating instructions. Improper adjustment of the controls may result in damage and involve a qualified technician to return the device to normal operation.

And do not connect multiple devices to one power adapter, as adapter overload can cause over-heat or fire hazard.

- Replacement parts When replacement parts are needed, service technicians must only use replacement parts provided by the supplier. Unauthorized substitutes can result in a burn, shock, or other hazards.
- Safety check On completion of servicing or repair work on the unit, ask the service technician to perform safety checks to make sure that the proper operation of the device.
- **9. Power sources** Operate the system only from the label's power source form. If the sort of power supply to use is unclear, contact your dealer.
- **10. Lightning** External lightning conductors can be installed to provide protection against electrical storms. It prevents power-ups from destroying the system.

It is recommended that the devices are installed in areas with limited access.

# 2 Electrical Safety

- Before connecting an external cable to the device, complete grounding properly, and set up surge protection; otherwise, static electricity will damage the mainboard.
- Make sure that the power has been disconnected before you wire, install, or dismantle the device.
- Make sure that the signal connected to the device is a weak-current (switch) signal; otherwise, components of the device will get damaged.

- Ensure that the standard voltage in your country or region is used. If you
  are not sure about the recommended standard voltage, please consult your
  local electric power company. A mismatch in power might result in a short
  circuit or device damage.
- Return the device to professional technical personnel or your dealer if the power supply is damaged.
- To avoid interference, keep the device away from high electromagnetic radiation devices, such as generators (including electric generators), radios, televisions, (especially CRT) monitors, or speakers.

# 3 Operation Safety

- If smoke, smell, or noise rise from the device, immediately turn off the power and unplug the power cable, and then please contact the service center.
- Transportation and other unpredictable factors may cause damage the device hardware. Before installation, check to see whether the device has any severe damage.
- If the device has major defects that you cannot solve, contact your dealer as soon as possible.
- Dust, moisture, and sudden temperature changes all can affect the device's service life. You are advised not to keep the device under such conditions.
- Do not keep the device in a place that vibrating surfaces. Handle the device with care. Do not place heavy objects on top of the device.
- Do not apply rosin, alcohol, benzene, pesticides, and other volatile substances that may damage the device enclosure. Clean the device accessories with a piece of soft cloth or a small amount of cleaning agent.
- If you have any technical questions regarding usage, contact certified or

experienced technical personnel.

#### Note:

- Make sure whether the positive polarity and negative polarity of the DC 12V power supply is connected correctly. A reverse connection may damage the device. It is not advisable to connect the AC 24V power supply to the DC 12V input port.
- Make sure to connect the wires following the positive polarity and negative polarity shown on the device's nameplate.
- The warranty service does not cover accidental damage, damage caused by incorrect operation, and damage due to independent installation or repair of the product by the user.

# 4 Instructions for Use

# 4.1 Installation

## 4.1.1 Installation Environment

Please refer to the following recommendations for installation

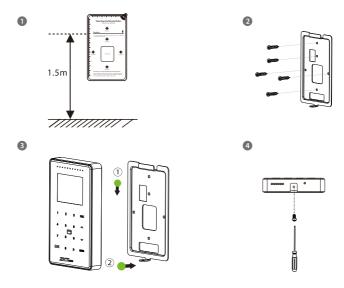

#### ANY HEAT SOURCE NEAR THE DEVICE

# 4.1.2 Device Installation

- 1. Stick the mounting template sticker to the wall, and drill holes according to the mounting template sticker.
- 2. Fix the backplate on the wall using wall mounting screws.
- 3. Place the device to the backplate.
- 4. Mount the device to the backplate with the security screws.

# 4.2 Standby Interface

The device uses a 2.4-inch color screen, which all operations are performed through hidden touch keypad. (*Note:* The device only supports the input of numbers, other characters such as English and symbols can be synchronized by the software down.) Before getting into the device features and functions, it is recommended to be familiar with the below fundamentals.

After connecting the power supply, the following standby interface is displayed:

• Enter any number to access the User ID input interface.

| 2022-10-27 11:06 | ⅆ₽⊇≎\$ | 2022-10-27 11:20 | ⅆ℞ℿ℮℗ |
|------------------|--------|------------------|-------|
| User ID          |        | User ID          |       |
| 1                |        | 1                |       |
|                  |        | Pas              | sword |
|                  |        | c                | ard   |
|                  |        |                  |       |

• When there is no Super Administrator set in the device, tap **M/OK** to go to the menu.

• After adding a Super Administrator on the device, it requires the Super Administrator's verification before opening the menu functions.

**<u>Note</u>**: For the security of the device, it is recommended to register a super administrator the first time you use the device.

 On the standby interface, the punch state options can also be shown and used directly. The black bold shortcut key mappings will be displayed on the screen if you tap the relevant shortcut key on the hidden touch keypad, as shown in the picture below. For the specific operation method, please see "Shortcut Key Mappings."

**<u>Note</u>**: The punch state options are disabled by default, and you must select other mode options in the "<u>Punch States Options</u>" section to see them on the standby screen.

# 4.3 Verification Mode

### 4.3.1 Card Verification

#### > 1: N Card Verification Mode:

The 1:N Card Verification Mode compares the card number in the card induction area with all the card number data registered in the device; The following is the card verification screen:

| 2022-10-27 15:33 | ى≎⊈⊉≎                      | 2022-10-27 15:32 | ⇙◮і⊒ॖ॒ॡ\$  |

### 4.3.2 Password Verification

The device compares the entered password with the registered password of the given User ID.

Enter the user ID and tap **M/OK** to enter the 1:1 password verification mode. Then, input the user ID and tap **M/OK**.

| 2022-10-27 15:38 | ى≎⊈⊈ | 2022-10-27 15:45 | ⇙⚠і⊒॒॒≎♦ |
|------------------|------|------------------|----------|
| User ID          |      | User ID          |          |

|                  | User ID : 1<br>Verify : Password | $\checkmark$     | Successfully verified.<br>User ID : 1<br>Verify : Password |

Below are the display screens after entering a correct password and a wrong password, respectively.

Verification is failed:

### 4.3.3 Combined Verification

Verification is successful:

This device allows you to use a different types of verification methods to increase security. There are a total of 5 different verification combinations that can be implemented, as listed below:

| Symbol | Definition | Explanation  |
|--------|------------|--|
| 1      | or         | This method compares the entered<br>verification of a person with the<br>related verification template |

#### **Combined Verification Symbol Definition**

|   |     | previously stored to that Personnel ID in the Device.   |
|---|-----|---|
| + | and | This method compares the entered<br>verification of a person with all the<br>verification templates previously<br>stored to that Personnel ID in the<br>Device. |

|   | Verification Mode |
|---|-------------------|
| ۲ | Password/Card     |
| 0 | User ID Only      |
| 0 | Password          |
| 0 | Card Only         |
| 0 | Password+Card     |

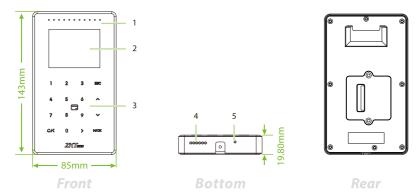

#### Combined Verification Mode set up procedure:

- Combined verification requires personnel to register all the different verification methods. Otherwise, employees will not be able to successfully verify the combined verification process.
- For example, if an employee has only registered for password data but the Device verification mode is set to "Password + Card," the employee will not be able to successfully complete the verification procedure.

#### Reason:

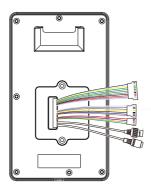

- This is because the Device compares the password template of the person with the registered verification template (both the Card and the Password) previously stored to that Personnel ID in the Device.
- But, since the employee has only registered their password and not their card, the verification process will not be successful, and the device will display "Verification Failed."

# 4.4 Appearance

| No. | Description           |
|-----|-----------------------|

# 4.6 Wiring Description

### 4.6.1 Power Connection

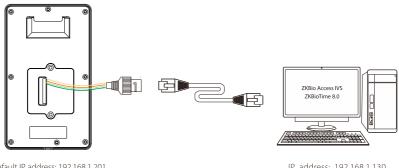

#### **Recommended AC Adapter**

- 1. 12V ± 10%, at least 3A.
- 2. To share the power with other devices, use an AC Adapter with higher current ratings.

### 4.6.2 Ethernet Connection

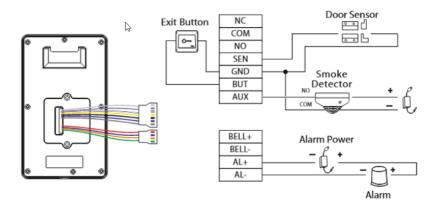

Connect the device and computer via an Ethernet cable, as shown in the example below:

Default IP address: 192.168.1.201 Subnet mask: 255.255.255.0 IP address: 192.168.1.130 Subnet mask: 255.255.255.0

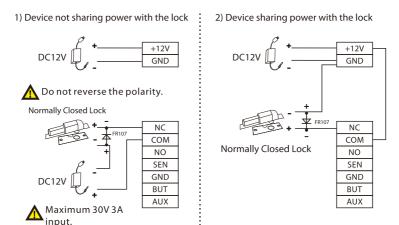

**Note:** In LAN, the IP addresses of the server (PC) and the device must be in the same network segment when connecting to the software.

## 4.6.3 Door Sensor, Exit Button, Alarm and Auxiliary Connection

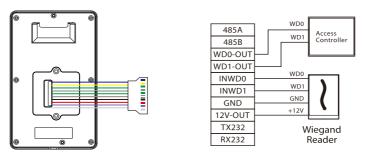

### 4.6.4 Lock Relay Connection

The system supports Normally Opened Lock and Normally Closed Lock. The NO LOCK (normally unlocked when power-ON) is connected with 'NO' and 'COM' terminals, and the NC LOCK (normally locked when power-ON) is connected with 'NC' and 'COM' terminals. Take NC Lock as an example below:

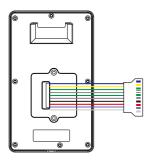

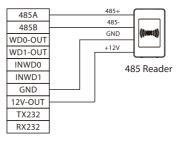

### 4.6.5 Wiegand Reader Connection

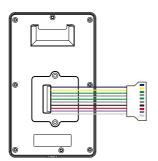

**Note:** 485A and 485B can be connected to the Barrier gate or the 485 Reader, separately, but cannot be connected to the gate and reader at the same time.

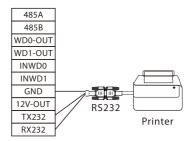

### 4.6.6 RS485 Connection

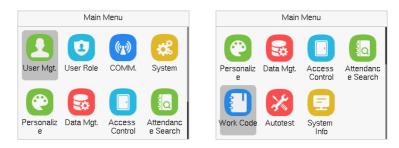

### 4.6.7 RS232 Connection

Tap **M/OK** on the initial interface to enter the main menu, as shown below:

#### **Function Description**

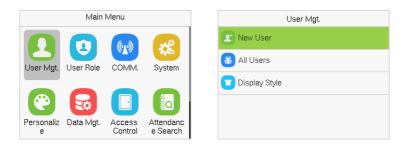

| Menu        | Description   |
|-------------|---|
| User Mgt.   | To Add, Edit, View, and Delete information of a User.   |
| User Role   | To set the permission scope of the custom role<br>and enroller for the users, for example the<br>system's operating rights.   |
| СОММ.       | To set the relevant parameters of Network, Serial<br>Comm., PC Connection, Wi-Fi, Cloud Server,<br>Wiegand and Network Diagnosis.   |
| System      | To set parameters related to the system, including<br>Date Time, attendance/Access Logs Settings, Card<br>management, Device Type Settings, Security<br>Settings and resetting to factory settings. |
| Personalize | To customize settings of User Interface, Voice, Bell<br>Schedules, Punch State Options and Shortcut Key<br>Mappings settings.   |
| Data Mgt.   | To delete, backup or restore the data.  |

| Access Control    | To set the parameters of the lock and the relevant<br>access control device including options like Time<br>schedule, Holiday Settings, Combine verification,<br>Anti-Passback Setup, and Duress Option Settings. |
|-------------------|--|
| Attendance Search | To query the specified Event logs.   |
| Work Code         | Set different type of work.  |
| Autotest          | To automatically test whether each module functions properly, including the LCD Screen, Audio, Keyboard and Real-Time Clock.   |
| System Info       | To view Privacy Policy, Data Capacity and Device and Firmware information of the current device.   |

# 6 User Management

# 6.1 New User Registration

Tap **User Mgt.** on the main menu.

### 6.1.1 Register a User ID

Tap New User and enter the User ID.

| New User            |             | Use          | er ID        |
|---------------------|-------------|--------------|--------------|
| User ID             | 2           | Please input |              |
| User Role           | Normal User | 2            |              |
| Card Number         |             |              |              |
| Password            |             |              |              |
| Access Control Role |             | Confirm (OK) | Cancel (ESC) |

#### Note:

- 1. By default, the user ID can have 1 to 14 digits.
- 2. During the initial registration, you can modify your ID but not after the registration.
- If the message "Duplicated!" appears, you must choose a different User ID because the one you entered already exists.

4. The device only supports the input of numbers, other characters such as English and symbols can be synchronized by the software.

### 6.1.2 User Role

On the **New User** interface, tap on **User Role** to set the user's role as either **Normal User** or **Super Admin**.

- **Super Admin:** The Super Administrator owns all management privileges in the Device.
- Normal User: If the Super Admin is registered already in the device, then the Normal Users will not have the privilege to manage the system and can only access authentic verifications.
- User Defined Roles: The Normal User can also be assigned custom roles with User Defined Role. The user can be permitted to access several menu options as required.

**<u>Note</u>:** If the selected user role is the Super Admin, then the user must pass the identity authentication to access the main menu. The authentication is based on the authentication method(s) that the super administrator has registered.

### 6.1.3 Card Number

Tap **Card Number** in the **New User** interface to enter the card registration page.

- Swipe the card underneath the card reading area on the Card interface. The registration of the card will be successful.
- If the card has already been registered, the message "Error! Card already

enrolled" appears. The registration interface looks like this:

### 6.1.4 Password

Tap **Password** in the **New User** interface to enter the password registration page.

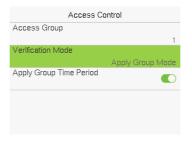

- On the Password interface, enter the required password and re-enter to confirm it and tap **M/OK**.
- If the re-entered password is different from the initially entered password, then the device prompts the message as "Password not match!", where the user needs to re-confirm the password again.
- The password may contain 6 to 8 digits by default.

| Password     |              | Password                 |              |
|--------------|--------------|--------------------------|--------------|
| Please input |              | Please re-type the passw | /ord.        |
| [            |              |                          |              |
|              |              |                          |              |
| Confirm (OK) | Cancel (ESC) | Confirm (OK)             | Cancel (ESC) |

### 6.1.5 Access Control Role

The **Access Control Role** sets the door access privilege for each user. It includes the access group, verification mode and time period

- Tap Access Control Role > Access Group to assign the registered users to different groups for better management. New users belong to Group 1 by default and can be reassigned to other groups. The device supports up to 99 Access Control groups.
- Tap Verification Mode, to select the verification mode.
- Tap **Apply Group Time Period**, to select the time to use.

# 6.2 All Users

On the Main Menu, tap User Mgt., and then tap All Users to search a User.

• On the **All-Users** interface, tap on the search bar on the user's list to enter the user ID and the system will search for the related user information.

| User Mgt.       | All Users |
|-----------------|-----------|
| 😰 New User      | 1 🖩 🕯     |
| 🔏 All Users     | 2         |
| 👕 Display Style | 3         |
|                 | 4         |
|                 | Q         |

### 6.2.1 Edit User

On the **All-Users** interface, tap on the required user from the list and tap **Edit** to edit the user information.

| User : 1 | Edit : 1            |             |
|----------|---------------------|-------------|
| Edit     | User ID             | 1           |
| Delete   | User Role           | Normal User |
|          | Card Number         | 1311129248  |
|          | Password            | ******      |
|          | Access Control Role |             |

<u>Note:</u> The process of editing the user information is the same as adding a new user, except that the User ID cannot be modified while editing a user. The process in detail refers to "User Registration".

### 6.2.2 Delete User

On the **All Users** interface, tap on the required user from the list and tap **Delete** to delete the user or specific user information from the device. On the **Delete** interface, tap on the required operation, and then tap **M/OK** to confirm the deletion.

#### **Delete Operations:**

- **Delete User:** Deletes all the user information (deletes the selected User as a whole) from the Device.
- **Delete User Role Only:** Deletes the user's administrator privileges and make the user a normal user.
- Delete Password Only: Deletes the password information of the selected user.
- Delete Card Number Only: Deletes the card information of the selected user.

| User: 1 | Delete : 1              |
|---------|-------------------------|
| Edit    | Delete User             |
| Delete  | Delete User Role Only   |
|         | Delete Password Only    |
|         | Delete Card Number Only |
|         |                         |

# 6.3 Display Style

On the **Main Menu**, tap **User Mgt.**, and then tap **Display Style** to enter Display Style setting interface.

| User Mgt.       | Display Style   |
|-----------------|-----------------|
| 😰 New User      | O Multiple Line |
| All Users       | Mixed Line      |
| 👕 Display Style |                 |
|                 |                 |
|                 |                 |
|                 |                 |

All the Display Styles are shown as below:

#### Multiple Line:

|        | All Users |
|--------|-----------|
| 1      |           |
| 1 II S |           |
| 2      |           |
| 3 11   |           |
| 3      |           |
| 3      |           |
| 4      |           |
| Ł      |           |
| Q,     |           |

#### Mixed Line:

# 7 User Role

**User Role** allows you to assign specific permissions to certain users based on their requirements

- On the **Main** menu, tap **User Role**, and then tap on the **User Defined Role** to set the user defined permissions.
- The permission scope of the custom role can be set up into 3 roles, that is, the custom operating scope of the menu functions of the user.

| User Role             |
|-----------------------|
| Subser Defined Role 1 |
| User Defined Role 2   |
| Logined Role 3        |
| Enroller              |
|                       |

• On the **User Defined Role** interface, toggle **Enable Defined Role** to enable or disable the user defined role.

| User Defined Role 1 |                     |  |
|---------------------|---------------------|--|
| Enable Defined Role |                     |  |
| Name                |                     |  |
|                     | User Defined Role 1 |  |
| Define User Role    |                     |  |
|                     |                     |  |
|                     |                     |  |
|                     |                     |  |
|                     |                     |  |

- Then, by selecting on Define User Role, select the required privileges for the new role, and then tap the **M/OK** key.
- When assigning privileges the main menu function names will be displayed on the left and its sub-menus will be listed on the right.

• First tap on the required **Main Menu** function name, and then select its required sub-menus from the list.

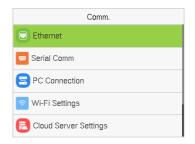

| User Defined Role 1 |                 | User Defined Role 1 |                 |
|---------------------|-----------------|---------------------|-----------------|
| 🗹 User Mgt.         | 🗹 New User      | ✓ Access Control    | Device Capacity |
| Comm.               | MII Users       | Attendance Search   | Device Info     |
| ☑ System            | 🗹 Display Style | U Work Code         | Firmware Info   |
| Personalize         |                 | Autotest            |                 |
| 🗌 Data Mgt.         |                 | System Info         |                 |

<u>Note:</u> If the User Role is enabled for the Device, tap on **User Mgt. > New User > User Role** to assign the created roles to the required users. But if there is no super administrator registered in the Device, then the device will prompt "**Please enroll super admin first!**" when enabling the User Role function.

# 8 Communication

Communication Settings are used to set the parameters of the Network, Serial Comm, PC Connection, Wi-Fi, Cloud Server, Wiegand, and Network Diagnosis.

Tap **COMM.** on the main menu.

# 8.1 Ethernet

When the device needs to communicate with a PC over the Ethernet, you need to configure network settings and make sure that the device and the PC connect to the same network segment.

Tap **Ethernet** on the **Comm.** Settings interface to configure the settings.

| Etherne       | ŧt             |
|---------------|----------------|
| IP Address    |                |
|               | 192.168.163.99 |
| Subnet Mask   |                |
|               | 255.255.255.0  |
| Gateway       |                |

| TCP COMM.Port         | 4370          |
| DHCP                  |               |
| Display in Status Bar |               |

## **Function Description:**

| Function Name            | Description   |
|--------------------------|---|
| IP Address               | The default IP address is 192.168.1.201. It can be modified according to the network availability.  |
| Subnet Mask              | The default Subnet Mask is 255.255.255.0. It can be modified according to the network availability. |
| Gateway                  | The Default Gateway address is 0.0.0.0. It can be modified according to the network availability.   |
| DNS                      | The default DNS address is 0.0.0.0. It can be modified according to the network availability.       |
| TCP COMM. Port           | The default TCP COMM Port value is 4370. It can be modified according to the network availability.  |
| DHCP                     | Dynamic Host Configuration Protocol dynamically allocates IP addresses for clients via server.      |
| Display in Status<br>Bar | Toggle to set whether to display the network icon on the status bar.                                |

# 8.2 Serial Comm

Serial Comm function establishes communication with the device through a serial port (Master Unit/OSDP Output).

Tap Serial Comm. on the Comm. Settings interface.

| Serial Comm             | Serial Port   |
|-------------------------|---------------|
| Serial Port<br>No Using | No Using      |
| Baudrate<br>115200      | O Master Unit |
|                         | O OSDP Output |

### **Function Description**

| Function Name | Description  |  |
|---------------|--|--|
|               | <b>No Using:</b> No communication with the device through the serial port.   |  |
| Serial Port   | <b>Master Unit:</b> When OSDP is used as the function of " <b>Master unit</b> ", it can be connected to a card reader.   |  |
|               | <b>OSDP Output:</b> Communicate with the device through the OSDP serial port.  |  |
|               | There are 4 baudrate options at which the data communicates with PC. They are: 115200 (default), 57600, 38400, and 19200.  |  |
| Baudrate      | The higher the baudrate, the faster is the communication speed, but also less reliable.  |  |
|               | Hence, a higher baudrate can be used when the<br>communication distance is short; when the<br>communication distance is long, choosing a lower<br>baudrate is more reliable. |  |

# 8.3 PC Connection

Comm Key facilitates to improve the security of the data by setting up the communication between the device and the PC. Once the Comm Key is set, a password is required to connect the device to the PC software.

Tap **PC Connection** on the **Comm.** Settings interface to configure the communication settings.

| Function Name | Description                                   |
|---------------|---|
| Comm Key      | The default password is 0 and can be changed. |
|               | The Comm Key can contain 1 to 6 digits.       |

|          | It is the identification number of the device, which ranges between 1 and 254.  |
|----------|---|
| Baudrate | If the communication method is RS485, you need to<br>input this device ID in the software communication<br>interface. |

## 8.4 Wi-Fi Settings

The device provides a Wi-Fi module, which can be built-in within the device module or can be externally connected.

The Wi-Fi module enables data transmission via Wi-Fi (Wireless Fidelity) and establishes a wireless network environment. Wi-Fi is enabled by default in the device. If you don't need to use the Wi-Fi network, you can toggle the Wi-Fi to disable the button.

Tap **Wi-Fi Settings** on the **Comm.** Settings interface to configure the Wi-Fi settings.

## > Searching the Wi-Fi Network

- WIFI is enabled in the device by default. Toggle the Solution to enable or disable WIFI.
- Once the Wi-Fi is turned on, the device will search for the available Wi-Fi within the network range.
- Tap on the required Wi-Fi name from the available list and input the correct

| password in the | password interface, | and then ta | p M/OK. |
|-----------------|---------------------|-------------|---------|
|-----------------|---------------------|-------------|---------|

| Wi-Fi Settings   | zkcs                               |
|--|------------------------------------|
| WIFI 🤍   | Security: WPAPSK/WPA2PSK           |
| CMW-AP Connected   | Signal Strength: Very Strong       |
| zkcs 🛜   | Password                           |
| Tenda_test1 🛜  |                                    |
| ZYPT-HW4 🚳   | Connect to Wi-Fi (OK) Cancel (ESC) |
| <b>WIFI Enabled:</b> Tap on the required network from the searched network list. | Tap on the password held to        |
|  |                                    |

 When the WIFI is connected successfully, the initial interface will display the Wi-Fi 🗧 logo.

#### Adding Wi-Fi Network Manually

The Wi-Fi can also be added manually if the required Wi-Fi does not show on the list.

| Wi-Fi Settings    |          |
|-------------------|----------|
| PLtest-1          | <b>A</b> |
| HUAWEI-10GB09     | <b>R</b> |
| li                | <b>R</b> |
| ZKfufu            | <b>R</b> |
| Add Wi-Fi Network |          |

| Add Wi-Fi Network |       |
|-------------------|-------|
| SSID              |       |
| Network Mode      |       |
|                   | INFRA |
| Auth. Mode        |       |
|                   | OPEN  |
|                   |       |
|                   |       |
|                   |       |
|                   |       |

Tap on **Add Wi-Fi Network** to add the Wi-Fi manually.

On this interface, enter the Wi-Fi network parameters. (The added network must exist.)

**<u>Note</u>**: After successfully adding the WIFI manually, follow the same process to search for the added Wi-Fi name.

## Advanced Setting

On the **Wi-Fi Settings** interface, tap on **Advanced** to set the relevant parameters as required.

| Wi-Fi Settings    |          |
|-------------------|----------|
| HUAWEI-10GB09     | 2        |
| li                | <b>R</b> |
| ZKfufu            | <b>R</b> |
| Add Wi-Fi Network |          |
| Advanced          |          |

| Ethern      | et      |
|-------------|---------|
| DHCP        |         |
| IP Address  | 0.0.0.0 |
| Subnet Mask | 0.0.0.0 |
| Gateway     | 0.0.0.0 |
|             |         |

### **Function Description**

| Function Name | Description  |  |
|---------------|--|--|
| DHCP          | Dynamic Host Configuration Protocol (DHCP)<br>dynamically allocates IP addresses to network clients. If<br>the DHCP is enabled, then the IP cannot be set<br>manually. |  |
| IP Address    | The IP address for the Wi-Fi network, the default is 0.0.0.0. It can be modified according to the network availability.  |  |
| Subnet Mask   | The default Subnet Mask of the Wi-Fi network is 255.255.255.0. It can be modified according to the network availability.   |  |
| Gateway       | The Default Gateway address is 0.0.0.0. It can be modified according to the network availability.  |  |

## 8.5 Cloud Server Settings

Tap **Cloud Server Settings** on the **Comm.** Settings interface to connect with the ADMS server.

| Cloud Server Settings |              |
|-----------------------|--------------|
| Server Mode           |              |
|                       | ADMS         |
| Server Address        |              |
|                       | 110.80.38.74 |
| Server Port           |              |
|                       | 8088         |
| Enable Proxy Server   |              |
| HTTPS                 |              |

### **Function Description**

| Function Name          | Description   |
|------------------------|---|
| Server Address         | The IP address of the ADMS server.  |
| Server Port            | Port used by the ADMS server.   |
| Enable Proxy<br>Server | The IP address and the port number of the proxy server is set manually when the proxy is enabled.                                 |
| нттрѕ                  | Based on HTTP, transmission encryption and identity<br>authentication make sure that the security of the<br>transmission process. |

# 8.6 Wiegand Setup

It is used to set the Wiegand input and output parameters.

Tap **Wiegand Setup** on the **Comm.** Settings interface to set up the Wiegand input and output parameters.

| Wiegand Setup  |  |
|----------------|--|
| Wiegand Input  |  |
| Wiegand Output |  |

## 8.6.1 Wiegand Input

| Wiegand Options    |         |
|--------------------|---------|
| Wiegand Format     |         |
| Wiegand Bits       | 26      |
| Pulse Width(us)    | 100     |
| Pulse Interval(us) | 1000    |
| ID Type            | User ID |

| Function Name      | Description   |
|--------------------|---|
| Wiegand Format     | Its value can be 26 bits, 34 bits, 36 bits, 37 bits, and 50 bits.   |
| Wiegand Bits       | The number of bits of the Wiegand data.   |
| Pulse Width(us)    | The value of the pulse width sent by Wiegand is<br>100 microseconds by default, which can be<br>adjusted within the range of 20 to 400<br>microseconds. |
| Pulse Interval(us) | The default value is 1000 microseconds and can<br>be adjusted within the range of 200 to 20000<br>microseconds.   |
| ID Type            | Select between the User ID and card number.   |

| Wiegand Format | Description                            |
|----------------|--|
| Wiegand26      | ECCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCC |
| Wiegand26a     | ESSSSSSSCCCCCCCCCCCCCCCCCCCCCCCCCCCCCC |
| Wiegand34      | ECCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCC |
| Wiegand 34a    | ESSSSSSSCCCCCCCCCCCCCCCCCCCCCCCCCCCCCC |

| Wiegand 36  | OFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF   |
|-------------|--|
| Wiegand 36a | EFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF   |
| Wiegand 37  | OMMMMSSSSSSSSSSSSSSSSSSSSSSSSSSSSSSSSS   |
| Wiegand 37a | EMMMFFFFFFFFFFFSSSSSSCCCCCCCCCCCCCCCCCCC |

|           | ESSSSSSSSSSSSSSSSSCCCCCCCCCCCCCCCCCCCCC  |
|-----------|--|
| Wiegand50 | It consists of 50 bits of binary code. The 1 <sup>st</sup> bit is the even parity bit of the $2^{nd}$ to $25^{th}$ bits, while the $50^{th}$ bit |
|           | is the odd parity bit of the 26 <sup>th</sup> to 49 <sup>th</sup> bits. The 2 <sup>nd</sup> to   |
|           | 17 <sup>th</sup> bits is the site codes, and the 18 <sup>th</sup> to 49 <sup>th</sup> bits are the card numbers.                                 |

"C" denotes the card number; "E" denotes the even parity bit; "O" denotes the odd parity bit.

"F" denotes the facility code; "M" denotes the manufacturer code; "P" denotes the parity bit; and "S" denotes the site code.

## 8.6.2 Wiegand Output

| Wiegand Options     |          |
|---------------------|----------|
| Wiegand Format      |          |
| Wiegand Output Bits |          |
| E-Statup            | 26       |
| Failed ID           | Disabled |
| Site Code           | Disablea |
|                     | Disabled |
| Pulse Width(us)     |          |
|                     | 100      |

| Wiegand Options    |          |
|--------------------|----------|
| Failed ID          |          |
|                    | Disabled |
| Site Code          |          |
|                    | Disabled |
| Pulse Width(us)    |          |
| Pulse Interval(us) | 100      |
| ruise interval(us) | 1000     |
| ID Type            | 1000     |
| 10 1900            | User ID  |

| Function Name       | Description  |
|---------------------|--|
| Wiegand Format      | Its value can be 26 bits, 34 bits, 36 bits, 37 bits, and 50 bits.  |
| Wiegand Output Bits | After selecting the required Wiegand format, select the corresponding output bit digits from the Wiegand format. |

| Failed ID          | If the verification fails, the system will send the failed ID to the device and replace the card number or personnel ID with the new one.   |
|--------------------|---|
| Site Code          | It is similar to the device ID. The difference is<br>that a site code can be set manually and is<br>repeatable on a different device. The valid value<br>ranges from 0 to 256 by default. |
| Pulse Width(us)    | The time width represents the changes in the quantity of electric charge with regular high-frequency capacitance within a specified time.   |
| Pulse Interval(us) | The time interval between pulses.   |
| ID Туре            | Select the ID types as either User ID or card number.   |

# 8.7 Network Diagnosis

It helps to set the network diagnosis parameters.

Tap **Network Diagnosis** on the **Comm.** Settings interface. Enter the IP address that needs to be diagnosed and tap **Start the Diagnostic Test** to check whether the network can connect to the device.

# 9 System Settings

It helps to set related system parameters to optimize the accessibility of the device.

Tap System on the Main Menu interface to get into its menu options.

### Access Control Terminal:

| System                 | System                 |
|------------------------|------------------------|

| Security Settings      | 3 Reset                |

# 9.1 Date and Time

Tap Date Time on the System interface to set the date and time.

| Date Time                  | !                 |
|----------------------------|-------------------|
| Date and Time Auto Sync    |                   |
| Set the NTP Server Address |                   |
|                            | 0.cn.pool.ntp.org |
| Select Time Zone           |                   |
|                            | UTC+8:00          |
| 24-Hour Time               |                   |
|                            |                   |
| Date Format                |                   |
|                            | YYYY-MM-DD        |

- Tap **Date and Time Auto Sync** to enable automatic time synchronization based on the service address you enter.
- Tap Set the NTP Server Address to manually set the date and time and then tap to Confirm and save.
- Tap Select Time Zone to manually select the time zone where the device is located.
- Enable or disable this format by tapping 24-Hour Time. If enabled, then select the **Date Format** to set the date.
- Tap Daylight Saving Time to enable or disable the function. If enabled, tap Daylight Saving Mode to select a daylight-saving mode and then tap Daylight Saving Setup to set the switch time.

| Daylight Saving Setup |        |
|-----------------------|--------|
| Start Month           | 1      |
| Start Week            | 1      |
| Start Day             | Sunday |
| Start Time            | 00:00  |
| End Month             | 1      |

|            | Daylight Saving Setup |       |
|------------|-----------------------|-------|
| Start Date |                       | 00-00 |
| Start Time |                       | 00:00 |
| End Date   |                       | 00-00 |
| End Time   |                       | 00:00 |
|            |                       |       |

### Week Mode

#### Date Mode

 When restoring the factory settings, the time (24-hour) and date format (YYYY-MM-DD) can be restored, but the device date and time cannot be restored. **Note:** For example, if a user sets the time of the device from 18:35 on March 15, 2020 to 18:30 on January 1, 2021. After restoring the factory settings, the time of the device will remain at 18:30 on January 1, 2021.

## 9.2 Access Logs Settings and Attendance

Tap Access Logs Settings and Attendance on the System interface.

#### **Access Control Terminal:**

| Access Logs Settings        |          |
|-----------------------------|----------|
| Access Log Alert            |          |
|                             | 99       |
| Periodic Del of Access Logs |          |
|                             | Disabled |
| Authentication Timeout(s)   |          |
|                             | 3        |

### Time Attendance Terminal:

| Attendance                |          |
|---------------------------|----------|
| Duplicate Punch Period(m) |          |
|                           | 1        |
| Attendance Log Alert      |          |
|                           | 99       |
| Periodic Del of T&A Data  |          |
|                           | Disabled |
| Authentication Timeout(s) |          |
|                           | 3        |

### Function Description of Access Control Terminal:

| Function Name    | Description  |
|------------------|--|
| Access Log Alert | When the record space of the attendance access<br>reaches the maximum threshold value, the<br>device automatically displays the memory<br>space warning.<br>Users may disable the function or set a valid<br>value between 1 and 9999. |

| Periodic Del of Access<br>Logs | When access logs reach its maximum capacity,<br>the device automatically deletes a set of old<br>access logs.<br>Users may disable the function or set a valid<br>value between 1 and 999. |
|--------------------------------|--|
| Authentication                 | The amount of time taken to display a successful verification message.   |
| Timeout(s)                     | Valid value: 1 to 9 seconds.   |

## Function Description of Time Attendance Terminal:

| Function Name                | Description   |
|------------------------------|---|
| Duplicate Punch<br>Period(m) | Within a set time period (unit: minutes), the duplicated attendance record will not be reserved (value ranges from 1 to 999999 minutes).  |
| Attendance Log Alert         | When the record space of the attendance<br>reaches the maximum threshold value, the<br>device automatically displays the memory<br>space warning.<br>Users may disable the function or set a valid<br>value between 1 and 9999. |

| Periodic Del of T&A<br>Data | When attendance records reach its maximum<br>storage capacity, the device automatically<br>deletes a set of old attendance records.<br>Users may disable the function or set a valid<br>value between 1 and 999. |
|-----------------------------|--|
| Authentication              | The amount of time taken to display a successful verification message.   |
| Timeout(s)                  | Valid value: 1 to 9 seconds.   |

# 9.3 Card Management

Tap Card Management on the System interface.

| Card Type  |          | Card Type  |            |
|------------|----------|------------|------------|
| 💟 125kHz   | ☑ EM4102 | 🗹 125kHz   | FELICA     |
| ☑ 13.56MHz |          | 🔽 13.56MHz | HID ICLASS |
|            |          |            | MIFARE     |
|            |          |            | VINEC P2P  |
|            |          |            |            |

- During card management, the main menu card type will be displayed on the left and its sub-menus will be listed on the right.
- First tap on the required card type, and then select its required sub-menus from the list.

# 9.4 Device Type Settings

Tap **Device Type Setting** on the **System** interface to configure the Device Type Settings.

| Device Type Settings   |               |
|------------------------|---------------|
| Communication Protocol | PUSH Protocol |
| Device Type            | A&C PUSH      |

| Function Name             | Description  |
|---------------------------|--|
| Communication<br>Protocol | Set the PUSH protocol.   |
| Device Type               | Set the device as an access control terminal or attendance terminal. |

**<u>Note</u>**: After changing the device type, the device will delete all the data and restart, and some functions will be adjusted accordingly.

# 9.5 Security Settings

Tap Security Settings on the System interface to go to the Security settings.

| Security Settings         |  |
|---------------------------|--|
| Security Mode             |  |
| Standalone Communication  |  |
| SSH                       |  |
| User ID Masking           |  |
| Display Verification Mode |  |

## **Function Description**

| Function Name                | Description  |
|------------------------------|--|
| Security Mode                | Select whether to enable the security mode to<br>protect the device and the user's personal<br>information. You can set the device to work<br>offline and hide the user's personal information<br>to prevent leakage during user verification. |
| Standalone<br>Communication  | To avoid being unable to use when the device is<br>offline, you can download the C/S software<br>(such as ZKAccess 3.5) on your computer in<br>advance for offline use.  |
| SSH                          | SSH is used to enter the background of the device for maintenance.   |
| User ID Masking              | When enabled, and then the user is successfully<br>compared and verified, the User ID in the<br>displayed verification result will be replaced<br>with an * to achieve secure protection of<br>sensitive private data.                         |
| Display Verification<br>Mode | Set whether to display the verification mode in the verification result interface.   |

# 9.6 Factory Reset

The Factory Reset function restores the device settings such as communication settings and system settings, to the default factory settings (this function does not clear registered user data).

Tap Reset on the System interface and then tap OK to restore the default

## factory settings.

| System          |
|-----------------|
| D Attendance    |
| Card Management |
| Reset?Restart   |
|                 |
| ОК              |
| Cancel          |

# 10 Personalize Settings

Tap **Personalize** the **Main Menu** interface to customize interface settings, voice, bell, punch state options, and shortcut key mappings.

# **10.1** User Interface

Tap **User Interface** on the **Personalize** interface to customize the display style of the main interface.

| User Interface             | User Interface             |
|----------------------------|----------------------------|
| Wallpaper                  | Menu Timeout(s)            |
|                            | 999                        |
| Language                   | Idle Time to Slide Show(s) |
| English                    |                            |
| Menu Timeout(s)            | Slide Show Interval(s)     |
| 99995                      | 3                          |
| Idle Time to Slide Show(s) | Idle Time to Sleep(m)      |
| 60                         | Disabl                     |
| Slide Show Interval(s)     | Main Screen Style          |
| 30                         | Style                      |

| Function Name | Description  |
|---------------|--|
| Wallpaper     | It helps to select the main screen wallpaper according to the user preference. |

| Language                       | It helps to select the language of the device.   |
|--------------------------------|--|
| Menu Timeout (s)               | When there is no operation, and the time<br>exceeds the set value, the device automatically<br>goes back to the initial interface.<br>The function can either be disabled or set the<br>required value between 60 and 99999 seconds. |
| Idle Time to Slide Show<br>(s) | When there is no operation, and the time<br>exceeds the set value, a slide show is displayed.<br>The function can be disabled, or you may set<br>the value between 3 and 999 seconds.  |
| Slide Show Interval (s)        | It is the time interval in switching between<br>different slide show pictures. The function can<br>be disabled, or you may set the interval<br>between 3 and 999 seconds.  |
| Idle Time to Sleep (m)         | If the sleep mode is activated, and when there is<br>no operation in the device, then the device will<br>enter standby mode.<br>This function can be disabled or set a value<br>within 1 to 999 minutes.                             |
| Main Screen Style              | The style of the main screen can be selected according to the user preference.   |

# 10.2 Voice

Tap **Voice** on the **Personalize** interface to configure the voice settings.

| Voice           |    |
|-----------------|----|
| Voice Prompt    |    |
| Keyboard Prompt |    |
| Volume          | 70 |

## **Function Description**

| Function Name   | Description   |
|-----------------|---|
| Voice Prompt    | Toggle to enable or disable the voice prompts during function operations. |
| Keyboard Prompt | Toggle to enable or disable the keypad sounds.                            |
| Volume          | Adjust the volume of the device which can be set between 0 to 100.        |

# **10.3 Bell Schedules**

Tap Bell Schedules on the Personalize interface to configure the Bell settings.

| Bell Schedules     |  |  |
|--------------------|--|--|
| New Bell Schedule  |  |  |
| All Bell Schedules |  |  |
|                    |  |  |
|                    |  |  |
|                    |  |  |
|                    |  |  |

### New Bell Schedule:

Tap **New Bell Schedule** on the **Bell Schedule** interface to add a new bell schedule.

| Bell Schedules     |  |  |
|--------------------|--|--|
| New Bell Schedule  |  |  |
| All Bell Schedules |  |  |
|                    |  |  |
|                    |  |  |
|                    |  |  |

| New Bell Schedule      |            |
|------------------------|------------|
| Bell Status            |            |
| Bell Time              |            |
| Repeat                 | Never      |
| Ring Tone              | bell01.wav |
| Internal Bell Delay(s) |            |
|                        | 5          |

## **Function Description**

| Function Name          | Description   |  |
|------------------------|---|--|
| Bell Status            | Toggle to enable or disable the bell status.  |  |
| Bell Time              | Once the required time is set, the device<br>automatically triggers to ring the bell during<br>that time. |  |
| Repeat                 | Set the required number of counts to repeat the scheduled bell.   |  |
| Ring Tone              | Select a ringtone.  |  |
| Internal Bell Delay(s) | Set the replay time of the internal bell. Valid values range from 1 to 999 seconds.                       |  |

### > All Bell Schedules:

Once the bell is scheduled, on the **Bell Schedules** interface, tap **All Bell Schedules** to view the newly scheduled bell.

## Edit the Scheduled Bell:

On the **All Bell Schedules** interface, tap on the required bell schedule, and tap **Edit** to edit the selected bell schedule. The editing method is the same as the operations of adding a new bell schedule.

## > Delete a Bell Schedules:

On the **All Bell Schedules** interface, tap the required bell schedule, tap **Delete**, and then tap **Yes** to delete the selected bell.

# **10.4 Punch States Options**

Tap **Punch States Options** on the **Personalize** interface to configure the punch state settings.

| Punch State Options                      | Punch State Mode     |  |
|--|----------------------|--|
| Punch State Mode<br>Manual and Auto Mode | ⊖ Off                |  |
| Punch State Timeout(s)<br>5              | O Manual Mode        |  |
| Punch State Required                     | O Auto Mode          |  |
|  | Manual and Auto Mode |  |
|  | O Manual Fixed Mode  |  |

| Function Name    | Description  |  |  |
|------------------|--|--|--|
| Punch State Mode | Off: Disable the punch state function. Therefore,<br>the punch state key set under Shortcut Key<br>Mappings menu will become invalid.<br>Manual Mode: Switch the punch state key<br>manually, and the punch state key will<br>disappear after Punch State Timeout. |  |  |
|                  | Auto Mode: The punch state key will  |  |  |

|                        | automatically switch to a specific punch status<br>according to the predefined time schedule<br>which can be set in the Shortcut Key Mappings.   |  |
|------------------------|--|--|
|                        | Manual and Auto Mode: The main interface<br>will display the auto-switch punch state key.<br>However, the users will still be able to select<br>alternative that is the manual attendance status.<br>After timeout, the manual switching to punch<br>state key will become auto-switch punch state<br>key. |  |
|                        | <b>Manual Fixed Mode:</b> After the punch state key<br>is set manually to a particular punch status, the<br>function will remain unchanged until it is being<br>manually switched again.   |  |
|                        | <b>Fixed Mode:</b> Only the manually fixed punch state key will be shown. Users cannot change the status by taping any other keys.   |  |
| Punch State Timeout(s) | It is the time for which the punch state displays.<br>The value ranges from 5 to 999 seconds.  |  |
| Punch State Required   | Select whether an attendance state needs to be<br>selected after verification.<br><b>ON:</b> Attendance state needs to be selected after<br>verification.  |  |
|                        | <b>OFF:</b> Attendance state need not requires to be selected after verification.  |  |

# **10.5 Shortcut Key Mappings**

Users may define shortcut keys for attendance status and functional keys which will be defined on the main interface. So, on the main interface, when the shortcut keys are tapped, the corresponding attendance status or the function interface will be displayed directly.

Tap **Shortcut Key Mappings** on the **Personalize** interface to set the required shortcut keys.

| Shortcut Key | / Mappings   |
|--------------|--------------|
| Ор Кеу       | Check-In     |
| Down Key     | Check-Out    |
| Left Key     | Overtime-In  |
| Right Key    | Overtime-Out |
| ESC/[-> Key  | Undefined    |

- On the **Shortcut Key Mappings** interface, tap on the required shortcut key to configure the shortcut key settings.
- On the Shortcut Key (example, "Up Key") interface, tap function to set the functional process of the shortcut key either as punch state key or function key.
- If the Shortcut key is defined as a function key (such as New user, All users, etc.), the configuration is completed as shown in the image below.

| Uр Кеу              | Uр Кеу   |
|---------------------|----------|
| Punch State Value   | Function |
| 0                   | New User |
| Function            |          |
| Punch State Options |          |
| Name                |          |
| Check-In            |          |
| Set Switch Time     |          |
|                     |          |
|                     |          |
|                     |          |

 If the Shortcut key is set as a punch state key (such as check in, check out, etc.), then it is required to set the punch state value (valid value 0 to 250), name.

#### Set the Switch Time

- The switch time is set in accordance with the punch state options.
- When the Punch State Mode is set to Auto Mode, the switch time should be set.
- On the **Shortcut Key** interface, tap **Set Switch Time** to set the switch time.
- On the **Switch Cycle** interface, select the switch cycle (Monday, Tuesday, etc.) as shown in the image below.

| Switch Cycle |  |  |
|--------------|--|--|
| 🗹 Monday     |  |  |
| ✓ Tuesday    |  |  |
| ✓ Wednesday  |  |  |
| ✓ Thursday   |  |  |
| ✓ Friday     |  |  |

|              | Set Switch Time |
|--------------|-----------------|
| Switch Cycle | Daily           |
| Monday       |                 |
| Tuesday      |                 |
| Wednesday    |                 |
| Thursday     |                 |

• Once the Switch cycle is selected, set the switch time for each day, and tap **OK** to confirm, as shown in the image below.

| Monday       |              | Set Switc    | h Time |
|--------------|--------------|--------------|--------|
| 13:          | 57           | Switch Cycle | Daily  |
| +            | +            | Monday       | 13:57  |
| 13           | 57           | Tuesday      |        |
| —            | —<br>MM      | Wednesday    |        |
| Confirm (OK) | Cancel (ESC) | Thursday     |        |

**<u>Note</u>**: When the function is set to Undefined, the device will not enable the punch state key.

# 11 Data Management

On the Main Menu, tap Data Mgt. to delete the relevant data in the device.

# 11.1 Delete Data

Tap **Delete Data** on the **Data Mgt.** interface to delete the required data.

| Delete Data           | Delete Data           |
|-----------------------|-----------------------|
| Delete Access Records | Delete Admin Role     |
| Delete All Data       | Delete Access Control |
| Delete Admin Role     | Delete Wallpaper      |
| Delete Access Control | Delete Screen Savers  |
| Delete Wallpaper      | Delete Backup Data    |

| Function Name                              | Description   |  |  |
|--|---|--|--|
| Delete Access Records<br>& Attendance Data | To delete the access records & attendance data conditionally.                           |  |  |
| Delete All Data                            | To delete the information and access records & attendance data of all registered users. |  |  |

| Delete Admin Role     | To remove all the administrator privileges.    |  |
|-----------------------|--|--|
| Delete Access Control | To delete all the access data.                 |  |
| Delete Wallpaper      | To delete all the wallpapers in the device.    |  |
| Delete Screen Savers  | To delete all the screen savers in the device. |  |
| Delete Backup Data    | To delete all the backup data in the device.   |  |

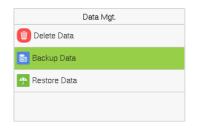

The user may select **Delete All** or **Delete by Time Range** when deleting the access records & attend date, to **Delete by Time Range**, you need to set a specific time range to delete all data within a specific period.

| Delete Access Records | Start Time |                           |    |      |    |    |
|-----------------------|------------|---------------------------|----|------|----|----|
| Delete All            |            | 2022-10-28 00:00          |    |      |    |    |
| Delete by Time Range  |            | +                         | +  | +    | +  | +  |
|                       |            | 2022                      | 10 | 28   | 00 | 00 |
|                       |            | _                         | _  | _    | _  | _  |
|                       |            | YYYY                      | MM | DD   | HH | MM |
|                       |            | Confirm (OK) Cancel (ESC) |    | ESC) |    |    |

# 11.2 Backup Data

Back up the configuration data of the device to the device.

Select the Backup Data option on the Data Mgt. interface.

• Select the local configuration items to be back up to the device and save the selected items.

| Backup Data      | Backup to Device                      |
|------------------|---------------------------------------|
| Backup to Device | Backup Content Business Data System D |
|                  | Backup Start                          |
|                  |                                       |
|                  |                                       |
|                  |                                       |
|                  |                                       |
| Backup Content   |                                       |
| 🔄 Business Data  |                                       |
| 🗹 System Data    |                                       |
|                  |                                       |
|                  |                                       |
|                  |                                       |

• Select **Backup Start** and tap **M/OK**.

## 11.3 Restore Date

Restore the data stored on the device to the device.

Select the Restore Data option on the Data Mgt. interface.

| Data Mgt.          |  |  |
|--------------------|--|--|
| 🔟 Delete Data      |  |  |
| 😂 Backup Data      |  |  |
| Arrow Restore Data |  |  |

• Select the local configuration items to be restore to the device and save the selected items.

| F             | Restore from Device    |  |  |
|---------------|------------------------|--|--|
| Content       | Business Data System D |  |  |
| Start Restore |                        |  |  |
|               |                        |  |  |
|               |                        |  |  |
|               |                        |  |  |
|               |                        |  |  |
|               | Content                |  |  |

### • Select Backup Start and tap M/OK.

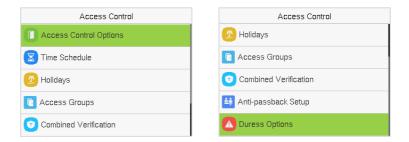

# 12 Access Control

On the **Main Menu**, tap **Access Control** to set the schedule of the door opening, locks control and to configure other parameters settings related to access control.

### Access Control Terminal:

| Access Control         | Access Control        |  |
|------------------------|-----------------------|--|
| Access Control Options | Time Rule Settings    |  |
| Time Rule Settings     | 2 Holidays            |  |
| 🕗 Holidays             | Combined Verification |  |
| Combined Verification  | 💐 Anti-passback Setup |  |
| 😫 Anti-passback Setup  | Duress Options        |  |

## Time Attendance Terminal:

### To get access, the registered user must meet the following conditions:

- 1. The relevant door's current unlock time should be within any valid time zone of the user's time period.
- The corresponding user's group must be already set in the door unlock combination (and if there are other groups, being set in the same access combo, then the verification of those group's members is also required to unlock the door).

3. In default settings, new users are allocated into the first group with the default group time zone, where the access combo is "1" and is set in unlock state by default.

## **12.1 Access Control Options**

Tap **Access Control Options** on the **Access Control** interface to set the parameters of the control lock of the terminal and related equipment.

#### **Access Control Terminal:**

| Access Control Options     |            |  |
|----------------------------|------------|--|
| Gate Control Mode          |            |  |
| Verification Mode          |            |  |
|                            | Password/C |  |
| Door Available Time Period |            |  |
|                            | 1          |  |
| Normal Open Time Period    |            |  |
|                            | None       |  |

### **Function Description of Access Control Terminal:**

| Function Name                 | Description   |
|-------------------------------|---|
| Gate Control Mode             | It toggles between <b>ON</b> or <b>OFF</b> switch to get into<br>gate control mode or not.<br>When set to <b>ON</b> , the interface removes the Door<br>Lock Delay, Door Sensor Delay, and Door Sensor<br>Type options.   |
| Verification Mode             | The supported verification mode includes<br>Password/Card, User ID Only, Password, Card<br>Only, Password + Card.   |
| Door Available Time<br>Period | It sets the timing for the door so that the door is accessible only during that period.   |
| Normal Open Time<br>Period    | It is the scheduled time-period for "Normal<br>Open" mode so that the door is always open<br>during this period.  |
| Master Device                 | <ul> <li>While configuring the master and slave devices, you may set the state of the master as <b>Out</b> or <b>In</b>.</li> <li><b>Out:</b> A record of verification on the master device is a check-out record.</li> <li><b>In:</b> A record of verification on the master device is a check-in record.</li> </ul> |

| Slave Device                     | <ul> <li>While configuring the master and slave devices, you may set the state of the slave as <b>Out</b> or <b>In</b>.</li> <li><b>Out:</b> A record of verification on the slave device is a check-out record.</li> <li><b>In:</b> A record of verification on the slave device is a check-in record.</li> </ul> |
|----------------------------------|--|
| Auxiliary Input<br>Configuration | Sets the door unlock time period and auxiliary<br>output type of the auxiliary terminal device.<br>Auxiliary output types include None, Trigger<br>door open, Trigger Alarm, Trigger door open<br>and Alarm.   |
| Verify Mode by RS485             | When the RS485 reader function is turned on,<br>the verification method is used when the device<br>is used as a master or a slave.   |
| Speaker Alarm                    | It transmits a sound alarm or disassembly alarm<br>from the local. When the door is closed or the<br>verification is successful, the system cancels the<br>alarm from the local.   |
| Reset Access Setting             | The access control reset parameters include<br>door lock delay, door sensor delay, door sensor<br>type, verification mode, door available time<br>period, normal open time period, master device,<br>and alarm. However, erased access control data<br>in Data Mgt. is excluded.                                   |

|--|

| Function Name         | Description   |
|-----------------------|---|
| Door Lock Delay (s)   | The length of time that the device controls the electric lock to be in unlock state.<br>Valid value: 0 to 10 seconds.   |
| Door Sensor Delay (s) | If the door is not locked and is left open for a<br>certain duration (Door Sensor Delay), an alarm<br>will be triggered.<br>The valid value of Door Sensor Delay ranges<br>from 1 to 255 seconds.   |
| Door Sensor Type      | There are three Sensor types: None, Normal<br>Open, and Normal Closed.<br>None: It means the door sensor is not in use.<br>Normally Open (NO): It means the door is<br>always left open when electric power is on.<br>Normally Closed (NC): It means the door is<br>always left closed when electric power is on. |
| Door Alarm Delay(s)   | When the state of the door sensor is<br>inconsistent with that of the door sensor type,<br>alarm will be triggered after a time period; this<br>time period is the Door Alarm Delay (the value<br>ranges from 1 to 999 seconds).  |

| Retry Times to Alarm             | When the number of failed verification reaches<br>the set value (value ranges from 1 to 9 times),<br>the alarm will be triggered. If the set value is<br>None, the alarm will not be triggered after failed<br>verification.   |
|----------------------------------|--|
| Auxiliary Input<br>Configuration | Sets the door unlock time period and auxiliary<br>output type of the auxiliary terminal device.<br>Auxiliary output types include None, Trigger<br>door open, Trigger Alarm, Trigger door open<br>and Alarm.   |
| Verify Mode by RS485             | When the RS485 reader function is turned on,<br>the verification method is used when the device<br>is used as a master or a slave.   |
| Valid Holidays                   | To set if <b>Normal Close Time Period</b> or <b>Normal</b><br><b>Open Time Period</b> settings are valid in set<br>holiday time period. Choose [ <b>ON</b> ] to enable the<br>set <b>NC</b> or <b>NO</b> time period in holiday.   |
| Speaker Alarm                    | It transmits a sound alarm or disassembly alarm<br>from the local. When the door is closed or the<br>verification is successful, the system cancels the<br>alarm from the local.   |
| Reset Access Setting             | The access control reset parameters include<br>door lock delay, door sensor delay, door sensor<br>type, verification mode, door available time<br>period, normal open time period, master device,<br>and alarm. However, erased access control data<br>in Data Mgt. is excluded. |

## 12.2 Time Rule Settings and Time Schedule

Tap **Time Rule Settings and Time Schedule** on the **Access Control** interface to configure the time settings.

- The entire system can define up to 50 Time Periods.
- Each time-period represents **10** Time Zones, i.e., **1** week and **3** holidays, and each time zone is a standard 24 hour period per day and the user can only verify within the valid time-period.
- One can set a maximum of 3 time periods for every time zone. The relationship among these time-periods is "OR". Thus, when the verification time falls in any one of these time-periods, the verification is valid.
- The Time Zone format of each time-period is H**H MM-HH MM**, which is accurate to minutes according to the 24-hour clock.

Tap the grey box to search the required Time Zone and specify the required Time Zone number (maximum up to 50 zones).

| Time Rule[2/50] |                      |  |  |
|-----------------|----------------------|--|--|
| Sunday          |                      |  |  |
|                 | [00:00 23:59] [00:00 |  |  |
| Monday          |                      |  |  |
|                 | [00:00 23:59] [00:00 |  |  |
| Tuesday         |                      |  |  |
|                 | [00:00 23:59] [00:00 |  |  |
| Wednesday       |                      |  |  |
|                 | [00:00 23:59] [00:00 |  |  |
| Q               |                      |  |  |

On the selected Time Zone number interface, tap on the required day (that is Monday, Tuesday, etc.) to set the time.

| Time Period 1 |     |    |            |
|---------------|-----|----|------------|
| 00:00 23:59   |     |    |            |
| +             | +   | +  | +          |
| 00            | 00  | 23 | 59         |
| -             | -   | —  | -          |
| НН            | MM  | НН | MM         |
| Confirm (C    | IK) | Ca | ncel (ESC) |

Specify the start and the end time, and then tap M/OK.

### Note:

- The door is inaccessible for the whole day when the End Time occurs before the Start Time (such as 23:57 to 23:56).
- It is the time interval for valid access when the End Time occurs after the Start Time (such as **08:00 to 23:59**).
- The door is accessible for the whole day when the End Time occurs after the Start Time (such that Start Time is **00:00** and End Time is **23:59**).
- 4. The default Time Zone 1 indicates that the door is open all day long.

### **12.3 Holidays**

When there is a holiday, you may need a different access time; however, altering everyone's access time one by one is extremely time-consuming. thus, a holiday access time that applies to all workers can be set, and the user will be able to open the door during the holidays.

Tap Holidays on the Access Control interface to set the holiday access.

| Holidays     |  |  |
|--------------|--|--|
| Add Holiday  |  |  |
| All Holidays |  |  |
|              |  |  |
|              |  |  |
|              |  |  |

### > Add a New Holiday:

Tap Add Holiday on the Holidays interface and set the holiday parameters.

### **Access Control Terminal:**

| Holidays           |                |
|--------------------|----------------|
| No.                | 1              |
| Date               | Undefined      |
| Holiday Type       | Holiday Type 1 |
| Repeats Every Year |                |

### **Time Attendance Terminal:**

| Holidays    |           |  |
|-------------|-----------|--|
| No.         |           |  |
|             | 1         |  |
| Start Date  |           |  |
|             | Undefined |  |
| End Date    |           |  |
|             | Undefined |  |
| Time Period |           |  |
|             | 1         |  |

### > Edit a Holiday:

On the **Holidays** interface, select a holiday item to be modified. Tap **Edit** to modify holiday parameters.

### Delete a Holiday:

On the Holidays interface, select a holiday item to be deleted and tap Delete.

Tap **M/OK** to confirm the deletion. After deletion, this holiday does not display on the **All Holidays** interface.

## 12.4 Access Groups

Grouping is to manage users in groups, only for time attendance terminal.

The default time zone for group members is the group time zone, while users can set their personal time zone. When the group verification mode and the user verification mode overlap, the user verification mode takes priority. Each group can set a maximum of 3 time zones; as long as one of them is valid, the group can be successfully verified. The newly enrolled user is assigned to Access Group 1 by default, but can be assigned to another access group.

Tap Access Groups on the Access Control interface.

### Add a New Holiday:

Tap New Group on the Access Group interface.

| Access Groups     |            |    |
|-------------------|------------|----|
| No.<br>2          | Verificati | io |
| Verification Mode | Time Per   | i  |
| Password/Card     |            |    |
| Time Period 1     | Time Per   | i  |
| 1                 |            |    |
| Time Period 2     | Time Per   | i  |
| 0                 |            |    |
| Time Period 3     | Include H  | Η  |
| 0                 |            |    |

| Access Groups     |               |  |
|-------------------|---------------|--|
| Verification Mode |               |  |
|                   | Password/Card |  |
| Time Period 1     |               |  |
|                   | 1             |  |
| Time Period 2     |               |  |
|                   | 0             |  |
| Time Period 3     |               |  |
|                   | 0             |  |
| Include Holidays  |               |  |

### Note:

1. The system has a default access group numbered 1, which cannot be

deleted but can be modified.

- 2. A number cannot be modified again after being set.
- 3. When the holiday is set to be valid, the personnel in a group can open the door only when group time period overlaps with the holiday time period.
- 4. When the holiday is set to be invalid, the access control time of the personnel in this group is not affected by holidays.

### Edit Group:

On the **All Group** interface, tap to select the access group item to be modified. Tap **Edit** to modify group parameters.

### Delete a Group:

On the **All Group** interface, select a access group item to be deleted and tap **Delete**. Tap **M/OK** to confirm the deletion. After deletion, this group does not display on the **All Group** interface.

## **12.5** Combined Verification

Access groups are arranged into different door-unlocking combinations to achieve multiple verifications and strengthen security.

In a door-unlocking combination, the range of the combined number N is  $0 \le N \le 5$  and the number of members N may all belong to one access group or may belong to five different access groups.

Tap **Combined Verification** on the **Access Control** interface to configure the combined verification setting.

| Combined Verification |     |                |  |
|-----------------------|-----|----------------|--|
| 1                     |     |                |  |
| 2                     |     | 01 00 00 00 00 |  |
| 2                     |     | 00 00 00 00 00 |  |
| 3                     |     |                |  |
| 4                     |     | 00 00 00 00 00 |  |
|                       |     | 00 00 00 00 00 |  |
| C                     | λ I |                |  |

On the combined verification interface, tap the Door-unlock combination to be set, and tap the **up** and **down** arrows to input the combination number, and then tap **M/OK**.

### For Example:

- If the Door-unlock combination 1 is set as (01 03 05 06 08). It indicates that the unlock combination 1 consists of 5 people and all the 5 individuals are from 5 groups, namely, AC Group 1, AC Group 3, AC Group 5, AC Group 6, and AC Group 8, respectively.
- If the Door-unlock combination 2 is set as (02 02 04 04 07). It indicates that the unlock combination 2 consists of 5 people; the first two are from AC Group 2, the next two are from AC Group 4, and the last person is from AC Group 7.
- If the Door-unlock combination 3 is set as (09 09 09 09 09). It indicates that there are 5 people in this combination; all of which are from AC Group 9.
- If the Door-unlock combination 4 is set as (03 05 08 00 00). It indicates that the unlock combination 4 consists of only three people. The first person is from AC Group 3, the second person is from AC Group 5, and the third person is from AC Group 8.

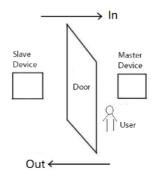

*Note:* To delete the door-unlock combination, set all Door-unlock combinations to 0.

## 12.6 Anti-passback Setup

A user may be followed by some person(s) to enter the door without verification, resulting in a security breach. So, to avoid such situations, the Anti-Passback option was developed. Once it is enabled, the check-in and check-out record must occur alternatively to open the door to represent a consistent pattern.

This function requires two devices to work together:

One device is installed on the indoor side of the door (master device), and the other one is installed on the outdoor side of the door (the slave device). The two devices communicate via the Wiegand signal. The Wiegand format and Output type (User ID/Card Number) adopted by the master device and slave device must be consistent.

### Tap Anti-passback Setup on the Access Control interface.

| Anti-passback Setup                     | Anti-passback Direction |  |
|---|-------------------------|--|
| Anti-passback Direction<br>No Anti-pass | No Anti-passback        |  |
|   | Out Anti-passback       |  |
|   | O In Anti-passback      |  |
|   | O In/Out Anti-passback  |  |

### **Function Description:**

| Function Name                               | Description  |
|---|--|
| Function Name<br>Anti-passback<br>Direction | <ul> <li>Description</li> <li>No Anti-passback: The Anti-Passback function is disabled, which means successful verification through either the master device or slave device can unlock the door. The attendance state is not saved in this option.</li> <li>Out Anti-passback: The user can check-out only if the last record is a check-in record otherwise an alarm is raised. However, the user can check-in freely.</li> <li>In Anti-Passback: The user can check-in again only if the last record is a check-in record otherwise an alarm is raised. However, the user can check-out record is a check-out record otherwise an alarm is raised. However, the user can check-out freely.</li> <li>In/Out Anti-passback: In this case, a user can</li> </ul> |
|   | check-in only if the last record is a check-out or<br>the user can check-out only if the last record is a  |
|   | check-in otherwise the alarm is triggered.   |

## **12.7** Duress Options Settings

Once a user activates the duress verification function with a specific authentication method(s), and when he/she is under coercion and authenticates using duress verification, the device unlocks the door as usual. At the same time, a signal is sent to activate the alarm as well.

On the **Access Control** interface, tap **Duress Options** to configure the duress settings.

### **Access Control Terminal:**

### **Time Attendance Terminal:**

| Duress Options    |    |  |  |
|-------------------|----|--|--|
| Duress Function   |    |  |  |
| Alarm on Password |    |  |  |
| Alarm Delay(s)    |    |  |  |
|                   | 10 |  |  |

### Function Description of Access Control Terminal:

| Function Name     | Description   |  |  |
|-------------------|---|--|--|
| Alarm on Password | When a user uses the password verification<br>method, an alarm signal will be generated,<br>otherwise there will be no alarm signal.  |  |  |
| Alarm Delay (s)   | Alarm signal will not be transmitted until the<br>alarm delay time is elapsed. The value ranges<br>from 1 to 999 seconds.             |  |  |
| Duress Password   | Set the 6-digit duress password. When the user<br>enters this duress password for verification, an<br>alarm signal will be generated. |  |  |

### Function Description of Time Attendance Terminal:

| Function Name          | Description   |  |  |  |
|------------------------|---|--|--|--|
| <b>Duress Function</b> | Enable/Disable the duress function.   |  |  |  |
| Alarm on Password      | In [ <b>ON</b> ] state, when a user uses password verification method, alarm will be triggered. In [ <b>OFF</b> ] state, no alarm signal will be triggered. |  |  |  |
| Alarm Delay (s)        | Alarm signal will not be transmitted until the<br>alarm delay time is elapsed. The value ranges<br>from 1 to 999 seconds.                                   |  |  |  |

# 13 Attendance Search

Once the identity of a user is verified, the access record is saved in the device. This function enables users to check their event logs.

Select **Attendance Search** on the **Main Menu** interface to search for the required event Logs.

| User ID                   |                   |  |
|---------------------------|-------------------|--|
| Please Input(query all da | ta without input) |  |
| Confirm (OK) Cancel (ESC) |                   |  |

 Enter the user ID to be searched and tap M/OK. If you want to search for records of all users, tap M/OK without entering any user ID.

| -     | 11      |                               |
|-------|---------|-------------------------------|
| Date  | User ID | Time                          |
| 10-28 |         | Number of Records:16          |
|       | 0       | 14:35 14:35 14:35 14:35 11:46 |
|       |         | 11:46 11:46 11:46 11:46 11:46 |
|       |         | 10:41 10:41 10:41 10:41 09:08 |
|       |         | 09:08                         |
| 10-27 |         | Number of Records:85          |
|       | 0       | 17:14 17:14 17:10 17:10 17:03 |
|       |         | 17:03 16:58 16:58 15:31 15:30 |
|       |         | 15:30 11:26 11:26 11:20 11:20 |

 Once the record search completes. Tap the record highlighted in green to view its details.

|   | Time Range |
|---|------------|
| ۲ | Today      |
| 0 | Yesterday  |
| 0 | This Week  |
| 0 | Last Week  |
| 0 | This Month |

 Select the time range in which the records need to be searched.

| Personal Record Search |            |           |        |       |       |
|------------------------|------------|-----------|--------|-------|-------|
| User ID                | Name Tim   | Ie        | Mode   | State | 10101 |
| 0                      | 10-        | 28 14:35  | 200    | 2     |       |
| 0                      | 10-        | 28 14:35  | 200    | 2     |       |
| 0                      | 10-        | 28 14:35  | 200    | 2     |       |
| 0                      | 10-        | 28 14:35  | 200    | 2     |       |

 The figure shows the details of the selected record.

# 14 Work Code

Employees' salaries are subject to their attendance records. An employee can be engaged in more than one type of work which may vary with time. As the pay varies according to the work types, the FFR terminal provides a parameter to indicate the corresponding work type for every attendance record to facilitate rapid understanding of different attendance situations during the handling of attendance data.

On the Main Menu, tap Work Code to set the work code.

## 14.1 New Work Code

### Function Description

| Function Name | Description   |  |  |
|---------------|---|--|--|
| ID            | It is the digital code of the work code. Users m<br>set a valid value between 1 and 99999999. |  |  |
| Name          | It is the naming of the work code. Only supports input the numbers.                           |  |  |

## 14.2 All Work Codes

You can view, edit and delete work codes in All Work Codes. The process of editing a work code is the same as adding a work code, except that the ID is not allowed to be modified.

| All Work Codes | 1      |
|----------------|--------|
| 1 1            | Edit   |
| 2 2            | Delete |
| 3 3            |        |
| 4 4            |        |
|                |        |

## 14.3 Work Code Options

To set whether entering the work code is a must and whether the entered work code must exist during authentication.

| Work Code Options      |  | Work Code Options       |  |
|------------------------|--|-------------------------|--|
| Work Code Required     |  | Work Code Required      |  |
| Work Code Must Defined |  | Input Screen Timeout(s) |  |
|                        |  | Work Code Must Defined  |  |
|                        |  |                         |  |
|                        |  |                         |  |

In **1: N** or **1:1** verification, the system will automatically pop up the following window. Select the corresponding Word Code manually to verify successfully.

▲₽\$

| Worl              | < Code | 2022-11-05 12:00 | <b>A</b> 7            |

| Enter Work Code : |        |                  |                       |

# 15 Autotest

Select **Main Menu**, tap on **Autotest**, it enables the system to automatically test whether the functions of various modules are working normally, including the LCD, Voice, Microphone, Fingerprint, Camera and Real-Time Clock (RTC).

| Autotest         |  |  |
|------------------|--|--|
| 🚼 Test All       |  |  |
| 🗔 Test LCD       |  |  |
| U Test Voice     |  |  |
| 📟 Test Keyboard  |  |  |
| S Test Clock RTC |  |  |

### **Function Description**

| Function Name | Description   |  |
|---------------|---|--|
| Test All      | To automatically test whether the LCD, Voice,<br>Microphone, Fingerprint, Camera and Real-Time<br>Clock (RTC) are normal.   |  |
| Test LCD      | To automatically test the display effect of LCD screen by displaying full-color, pure white, and pure black to check whether the screen displays colors normally. |  |
| Test Voice    | To automatically test whether the audio files<br>stored in the device are complete and the voice<br>quality is good.  |  |
| Test Keyboard | The terminal tests whether every key on the keyboard works normally. Tap any key on the   |  |

|                 | Test Keyboard interface to check whether the         |
|-----------------|--|
|                 | tapped key matches the key displayed on the          |
|                 | screen. The keys are displayed as dark grey          |
|                 | before and turn blue after tapped. Tap <b>ESC</b> to |
|                 | exit the test.                                       |
|                 |  |
|                 | To test the RTC. The device tests whether the        |
| Test Clock RTC  | clock works normally and accurately with a           |
| lest clock life | stopwatch. Touch the screen to start counting        |
|                 | and tap it again to stop counting.                   |
|                 |  |

# 16 System Information

On the **Main Menu**, tap **System Info** to view the storage status, the version information of the device, firmware information and the privacy policy.

| System Info             |
|-------------------------|
| Device Capacity         |
| Device Info             |
| Firmware Info           |
| <b>O</b> Privacy Policy |
|                         |

### **Function Description**

| Function Name   | Description  |
|-----------------|--|
| Device Capacity | Displays the current device's user storage, card<br>and password storage, administrators and<br>records.                             |
| Device Info     | Displays the device's name, serial number, MAC<br>address, Platform information, MCU Version,<br>Manufacturer, and manufacture date. |
| Firmware Info   | Displays the firmware version and other version information of the device.   |
| Privacy Policy  | Display the device's privacy policy.   |

# 17 Connect to ZKBio Access IVS Software

## **17.1 Set the Communication Address**

### > Device side:

 Tap COMM. > Ethernet in the main menu to set the IP address and gateway of the device.

(**<u>Note</u>**: The IP address should be able to communicate with the ZKBio Access IVS server, preferably in the same network segment with the server address).

 In the main menu, click COMM. > Cloud Server Setting to set the server address and server port.

Server address: Set the IP address as of ZKBio Access IVS server.

Server port: Set the server port as of ZKBio Access IVS (The default is 8088).

| Ethernet       | Cloud Server Settings |
|----------------|-----------------------|
| IP Address     | Server Mode           |
| 192.168.163.89 | ADMS                  |
| Subnet Mask    | Server Address        |
| 255.255.255.0  | 110.80.38.74          |
| Gateway        | Server Port           |
| 192.168.163.1  | 8088                  |
| DNS            | Enable Proxy Server   |
| 0.0.0          |                       |
| TCP COMM.Port  | HTTPS                 |
| 4370           |                       |

### Software side:

Login to ZKBio Access IVS software, click **System** > **Communication** > **Communication Monitor** to set the ADMS service port, as shown in the figure below:

|    | Ū                     |   | Adms Service Settings             |  |
|----|-----------------------|---|-----------------------------------|--|
| 88 | Basic Management      | ÷ | Adms Service Port                 | 8088   |
|    |                       |   | A The current port is for de      | evice communication service, if there is a network mapping for the service port, please refer to the actual mapped port. |
| க் | Authority Management  | Ð | Project control file version      | None   |
| ٩. | Communication         | Θ | Turn on encrypted<br>transmission | ● No ○ Yes   |
|    | Device Commands       |   |                                   |  |
|    | Communication Device  |   |                                   |  |
|    | Communication Monitor |   |                                   |  |

## 17.2 Add Device on the Software

Add the device by searching. The process is as follows:

- Click Access Control > Device > Search Device, to open the Search interface in the software.
- 2. Click Search, and it will prompt [Searching.....].
- After searching, the list and total number of access controllers will be displayed.

| Address   |             | Device Type |                 | Serial Number |             | $\otimes$  |            |
|-----------|-------------|-------------|-----------------|---------------|-------------|------------|------------|
| P Address | MAC Address | Subnet Mask | Gateway Address | Serial Number | Device Type | Set Server | Operations |
| .8        |             | 255.255     | 10              | (             |             |            | Add        |
|           |             | 200.200     |                 | Ch            |             |            | Add        |
|           |             |             |                 |               |             |            |            |
|           |             |             |                 |               |             |            |            |

 Click [Add] in operation column, a new window will pop-up. Select Icon type, Area, and Add to Level from each dropdown and click [OK] to add the device.

## 17.3 Add Personnel on the Software

|                                 |           |              | New                   |                   |           | x                          |

|                                 |           |              | Set Valid Time        |                   |           |                            |
|                                 |           |              |                       |                   |           |                            |
|                                 |           | Save an      | d New OK              | Cancel            |           |                            |

### 1. Click **Personnel** > **Person** > **New**:

- 2. Fill in all the required fields and click [OK] to register a new user.
- 3. Click Access > Device > Device Control > Synchronize All Data to

**Devices** to synchronize all the data to the device including the new users.

# 18 Connect to BioTime 8.0 Software

## **18.1 Set the Communication Address**

1. Tap **COMM.** > **Ethernet** in the main menu to set the IP address and gateway of the device.

(*Note:* The IP address should be able to communicate with the ZKBioTime 8.0 server, preferably in the same network segment with the server address)

 In the main menu, click COMM. > Cloud Server Setting to set the server address and server port.

Server address: Set the IP address as of ZKBioTime 8.0 server.

Server port: Set the server port as of ZKBioTime 8.0 server.

| IP Address    |                |
|---------------|----------------|
|               | 192.168.163.99 |
| Subnet Mask   |                |
|               | 255.255.255.0  |
| Gateway       |                |
|               | 192.168.163.1  |
| DNS           |                |
|               | 0.0.0.0        |
| TCP COMM.Part |                |
|               | 4370           |

| Cloud Server Se     | ettings      |
|---------------------|--------------|

- 2. Fill in all the required fields and click [Confirm] to register a new user.
- Click Device > Device > Data Transfer > Sync Data to Device to synchronize all the data to the device including the new users.

# 19 Connect to WebServer

## **19.1 Login WebServer**

According to the <u>configured network</u> login, allows the Webserver to remotely view the information of the device (hardware, software, capacity and data, etc.), set up the system (communication, access control and system functions, etc.), add users and upgrade the system.

| Main Menu   | Comm.                 | Ethernet                    |
|---|-----------------------|-----------------------------|
|   | Ethernet              | IP Address<br>192.168.1.201 |
| User Mgt. User Role CON M. / System                         | Serial Comm           | Subnet Mask 255.255.255.0   |
|   | PC Connection         | Gateway 192.168.1.1         |
|   | WI-Fi Settings        | DNS 0.0.0.0                 |
| Personaliz Data Mgt. Access Attendanc<br>e Control e Search | Cloud Server Settings | TCP COMM.Port<br>4370       |

 Open a browser and enter the address to log in to the WebServer; the address is https:// <u>Serial IP Address:1443</u>. For example: <u>https://192.168.1.201:1443</u>.

| and the second |                              | a second and the |

### Note:

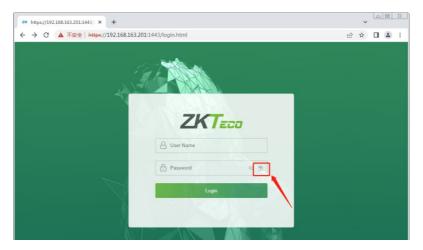

- After logging in for the first time, users must need to change their default password and log in again before they can use it, please refer to <u>Change</u> <u>Password</u>.
- 2. To retrieve the password easily, please register a super admin first, please refer to <u>User Registration</u>.

### **19.2 Forgot Password**

#### Method 1 (When there is a super admin):

If you forget your WebServer password, the registered super admin can reset it for you. The detailed steps are as follows:

1. Click the icon on the login interface.

2. On the pop-up page, enter the relevant information of the super admin user as prompted.

| ZK | ZKTeco management panel × +                    |              |                     | ~      |     |     | X |
|----|--|--------------|---------------------|--------|-----|-----|---|
|    | → C ▲ 不安全   https://192.168.163.201:1443/lostp | assword.html | L                   | 2 ☆    |     |     | : |
|    | Admin verification                             |              |                     |        |     |     |   |
|    | Please input admin user ID.                    | 1            | Enter super admin u | ıser i | d   |     |   |
|    | Password                                       |              | Enter super admin u | iser p | oss | wor | ď |
|    | Confirm  |              |                     |        |     |     |   |

 After a successful reset, enter the default user name and password (user name: admin and password: admin@123) on the login interface to log in.

| A admin<br>admin@123<br>Login |        |             |  |

|                 |                               | Enter a new password at least 8 characters. It must contain special characters, numbers an upper<br>and lower case letters. |
|                 | Enter a New<br>Password       |   |
|                 | Confirm<br>Password           |   |
|                 | 1                             | Confirm   |

*Note:* The super admin must exist.

### Method 2 (When there is not a super admin):

If the network of the device is normal and ZKBio Access IVS / ZKBioTime 8.0 has been connected, you can reset the password by sending the super admin account and password from the server.

 Click **Personnel** > **Person** > **New** on the ZKBio Access IVS / ZKBioTime 8.0 Server; register the super admin information and set the super admin role on the new interface as required.

|                           |                 |                  |                      |                 |               |                    |

- 2. After registering the information of the super admin, click Save and New.
- Click Access > Device > Control > Synchronize All Data to Devices to synchronize all the data to the device including the new users.

<u>Note</u>: For other specific operations, please refer *ZKBio Access IVS User Manual or ZKBioTime8.0 User Manual*.

 After the data synchronization is successful, you can reset the password with the newly registered super admin. The operation steps are the same as method 1.

### Method 3:

If the device has not registered a super admin and is unable to connect to the server, please contact our after-sales personnel for assistance in resetting the password.

### **19.3 User Registration**

Click User Mgt > All Users on the WebServer.

On **All Users** interface, you can register the User ID, Name, Rights, Password, Card Number and Access Control Role of the new user and then click **Confirm** to save.

| System Info            | Basic Info                 |               |          |

| Device Management      |                            |               |          |

| Function Name | Description   |
|---------------|---|
| User ID       | The default user ID can have 1 to 14 digits.  |
| Name          | A name can be up to 63 characters. The device<br>only supports the input of numbers, you can<br>add a user name by this method. |

| Rights              | <ul> <li>Set the role for the user as either Normal User or Super Admin.</li> <li>Super Admin: The Super Admin owns all management privileges in the WebServer.</li> <li>Normal User: If the Super Admin is already registered in the WebServer, then the Normal Users will not have the privileges to manage the system and can only access authentication verifications.</li> </ul> |
|---------------------|---|
| Password            | Set the user's registration password.   |
| Card Number         | Enter the card number manually, after registering the user's card number, the user can swipe the card for verification. Also can click <b>Register</b> , and the device will display the card registration interface in real time, swipe the card underneath the card reading area. The registration of the card will be successful.  |
| Access Control Role | The Access Control Role sets the door access<br>privilege for each user, new users will be added<br>to Group 1 by default, which can be reassigned<br>to other required groups. The system supports<br>up to 10 access control groups.  |

### Note:

- 1. During the initial registration, you can modify your ID; you cannot be modifying the registered ID once after the successful registration.
- If the message "Setup failed!" pops up, you must choose a different User ID because the one you entered already exists.

## **19.4 Search for Users**

Click **All Users** on the WebServer, click the **Search Bar** to enter the required retrieval keyword (which the keyword can be the user ID, surname or full name) and the system will search for the related user information.

| System              |                           |           |   |

| Function Name                | Description  |
|------------------------------|--|
| Volume                       | Adjust the volume of the device which can be set between 0 and 100.  |
| Language                     | Select the language of the WebServer and device.   |
| User ID Masking              | When enabled, and then the user is successfully<br>compared and verified, the User ID in the<br>displayed verification result will be replaced<br>with an * to achieve secure protection of<br>sensitive private data. |
| Display Verification<br>Name | Set whether to display the username in the verification result interface.  |
| Display Verification<br>Mode | Set whether to display the verification mode in the verification result interface.   |

#### Note:

- 1. After selecting the language and clicking **Confirm**, the device will automatically reboot and display the changed language.
- 2. Then, until the device reboots and logs in again, WebServer will not display the changed language.

### 19.11 Serial Comm

Click **Serial Comm** on the WebServer.

| Function Name | Description  |
|---------------|--|
| Serial Port   | <b>No Using:</b> No communication with the device through the serial port.   |
|               | <b>Master Unit:</b> When OSDP is used as the function of " <b>Master unit</b> ", it can be connected to a card reader.             |
|               | <b>OSDP Output:</b> Communicate with the device through the OSDP serial port.  |
| Baudrate      | There are 5 baudrate options at which the data communicates with the PC. They are: 115200 (default), 57600, 38400, 19200 and 9600. |
|               | The higher the baudrate, the faster is the communication speed, but also less reliable.  |
|               | Hence, a higher baudrate can be used when the communication distance is short; when the communication distance is long, choosing a |
|               | lower baudrate is more reliable.   |

### 19.12 Wiegand Setup

Click Wiegand Setup on the WebServer.

It is used to set the Wiegand input and output parameters.

| ZKTECO  |   |           |   | Ċ   |
|---|---|-----------|---|-----|

# **Eco-friendly Operation**

|                   | The product's "eco-friendly operational period" refers to the time during which this product will not discharge any toxic or hazardous substances when used in accordance with the prerequisites in this manual.<br>The eco-friendly operational period specified for this product does not include batteries or other components that are easily worn down and must be periodically replaced. The battery's eco-friendly operational period is 5 years. |                 |                 |                                  |                                   |   |  |  |
